

Overview

Nearly half of Americans suffer from chronic conditions, which account for seven out of every 10 deaths in the U.S.¹, and almost half of patients fail to receive the appropriate treatment, a result of unintended variation in care.² Caradigm Condition Management helps providers begin the journey to population health by enabling them to manage larger populations with chronic conditions and extend disease management into a more intensive process for high-risk patients.

Caradigm Condition Management helps organization improve clinical outcomes and financial results associated with costly chronic conditions, which account for three out of every four healthcare dollars spent.⁴

Caradigm® Condition Management is designed to help healthcare organizations manage the health of low to rising risk patients with chronic and costly conditions, such as heart disease, asthma or diabetes. Leveraging clinical and claims data, the application gives healthcare organizations the ability to monitor patients by configuring condition-specific care guidelines to identify gaps in care and compliance with the established criteria. Once gaps have been identified, organizations are well positioned to take action to close them using interventions developed as part of low-touch, one-to-many campaigns.

Key Features

- Population Identification and Stratification
- Patient Enrollment
- Gaps in Care Surveillance
- Clinical Intervention
- Analytics & Reporting

Key Benefits

- Manage performance according to evidence-based care guidelines
- Reduce variations in care for low and medium risk patients
- Identify trends in guideline compliance and areas of improvement through assessment against evidence-based criteria
- Gain insight and take action based on real-time clinical, financial and operational data
- Visualize trends and drill down for a 360 degree view of individual patient information

CARADIGM CONDITION MANAGEMENT

How it Works

Caradigm Condition Management is designed to help nurses, physicians and program coordinators gain the efficiencies to manage a large patient population with an array of conditions.

Summary

Caradigm Condition Management offers the opportunity to begin the journey to population health management without overhauling processes, personnel, technologies or business models. It can serve as an initial solution as organizations determine how they want to manage larger populations or extend disease management into a more intensive process for high-risk patients.
